

OSHA Update

Are you in compliance?

Failing to bring your company into compliance may subject your employees unnecessarily to workplace hazards as well as expose your company to costly OSHA penalties.

The Occupational Safety and Health Administration has made several significant changes to OSHA requirements that impact employers in the construction industry. Contractors must be aware of these changes and take appropriate measures to ensure they are in compliance.

This session will provide information regarding the following:

- Globally Harmonized System
- Confined Spaces in Construction
- Changes in Fatality and catastrophe reporting requirements
- Electronic submission of injury and illnesses records
- Respirable crystalline silica
- Adjustments in OSHA fine structures
- Changes to the Department of Justice's policy regarding criminal prosecution of workplace fatalities and workplace hazards.

This session is designed for owners, project managers, superintendents, foreman and anyone responsible for safety on a jobsite.

Instructor: Jim Redmond

Jim Redmond is the Director of Safety and Health Services for the Associated General Contractors (AGC) of America. Jim has been teaching and training on safety for many years. His "in the trenches" knowledge makes Jim an exceptional instructor.

Thursday, November 17, 2016
